**Accounting policies**

The financial statements of HUGO BOSS AG and the German and foreign subsidiaries are prepared pursuant to uniform accounting policies in accordance with IFRS 10.

**Recognition of income and expenses**

Income is recognized to the extent that it is probable that the economic benefits will flow to the Group and the income can be reliably measured. Income is measured at the fair value of the consideration received. Income is reported after deductions including discounts and other price deductions and net of VAT. The specific recognition criteria described below must also be met before income is recognized.

**Sale of merchandise and goods**

In the wholesale channel, income from the sale of goods is recognized when the significant risks and rewards of ownership of the goods have passed to the buyer. This is the case as soon as delivery to the wholesale partner has been executed and all obligations affecting the acceptance of the goods by the wholesale partner have been settled.

In the Group’s own retail business, opportunities and risks arising from the goods pass to the customer upon payment of the goods. Sales are recognized when transactions with customers are completed.

Sales via the online channel are recognized upon delivery of the goods to the customer. The date of delivery is deemed to be the date on which the opportunities and risks arising from the goods pass to the customer.

Claims under return agreements and rights of return are recognized in gross figures in the income statement and the balance sheet in connection with the recognition of sales. The income recognized in the income statement is reduced by an amount equaling the estimated sales attributable to the returned goods and the disposal of goods recorded through profit and loss when the goods are dispatched is adjusted for the estimated value of the returns. A miscellaneous non-financial asset is recognized equaling the amount of the historical costs for which a return is expected. Allowance is also made for additional costs and the loss arising from the resale of the returned goods.
Lincense and other income
License and other income are recognized in the period in which they are generated in accordance with the terms of the underlying agreements.

Operating income is recognized in the income statement when the service is used or generated where there is a direct relationship between the costs incurred and the corresponding income.

Interest income
Interest is recognized pro rata temporis taking into account the effective yield on the asset.

Functional costs
Operating expenses are essentially allocated to the individual function based on the respective cost centers. Expenses incurred in connection with cross-functional activities or projects are spread among the function costs concerned using an adequate allocation principle.

Research and development costs
Research costs are expensed as incurred. Development costs are likewise expensed as incurred if they do not satisfy the criteria for recognition as internally generated intangible assets. Production-related development costs are generally included in the calculation of the cost of unfinished and finished goods. These essentially comprise the cost of technical product development in the third phase of the collection creation process.

Income taxes
The tax rates and tax laws used to calculate the income tax are those that are enacted or substantively enacted on the reporting date in the countries where the Group operates and generates taxable income.

Receivables and provisions for current income taxes are recognized as soon as the realization is probable.

In accordance with IAS 12, deferred tax assets and deferred tax liabilities are recognized for all temporary differences between the tax bases and the carrying amounts for financial reporting purposes of the separate entities and the carrying amounts in the consolidated financial statements in accordance with IFRS and for certain consolidation entries.

Deferred tax assets also include tax credits that result from the expected utilization of existing unused tax losses in subsequent years and the realization of which can be assumed with reasonable assurance. Deferred tax assets and deferred tax liabilities are presented on a net basis to the extent that the deferred tax assets and deferred tax liabilities relate to the same taxable entity. Deferred tax assets and deferred tax liabilities are measured at the tax rates that are expected to apply when the temporary differences reverse.

Income taxes are recorded in the income statement with the exception of those relating to items recognized directly in equity.

Intangible assets
Intangible assets are recognized if it is probable that a future economic benefit will flow to the company from the use of the asset and the cost of the asset can be reliably determined. Acquired intangible assets and internally generated intangible assets are measured at cost. Cost of conversion includes all costs directly allocable to the production process as well as an appropriate portion of production-related overheads. Intangible assets with a finite useful life are systematically amortized using the straight-line method over their useful life.
Intangible assets include software and licenses, reacquired rights and key money with a finite and infinite useful life (one-off payments made to the previous tenant when leases are entered into for the Group’s own retail stores in prime locations). Intangible assets with an infinite useful life are tested for impairment once a year. If the carrying amount of the asset is no longer recoverable, an impairment loss is recognized.

**Property, plant and equipment**

Property, plant and equipment that are used in business operations for longer than one year are measured at cost less accumulated depreciation. Cost of conversion includes all costs directly allocable to the production process as well as an appropriate portion of production-related overheads. The underlying useful lives correspond to the expected useful lives within the Group. Property, plant and equipment are generally depreciated using the straight-line method.

Buildings and leasehold improvements on third-party land are depreciated over the term of the underlying lease agreements or the lower useful lives. The present value of the expected cost for the disposal or decommissioning of an asset after its use is included in the cost of the respective asset if the recognition criteria for a corresponding provision are satisfied.

The useful lives and depreciation methods used for property, plant and equipment are reviewed regularly to ensure that the methods and periods of depreciation are consistent with the expected economic benefit from the items of property, plant and equipment.

**Impairment of non-financial assets**

Non-financial assets (property, plant and equipment and intangible assets including goodwill) are assessed at every reporting date as to whether there is an indication of impairment (“triggering events”). If there is any such indication, the recoverable amount of the asset is estimated. Irrespective of whether there is any indication of impairment, intangible assets with indefinite useful lives (key money and brand rights) and goodwill acquired in a business combination are tested for impairment annually. The recoverable amount is the higher of fair value of the asset less costs to sell and value in use. The value in use is the present value of the expected cash flows. The expected cash flows are discounted using the after-tax weighted average cost of capital that reflects the risks specific to the asset. In determining fair value less costs to sell, external appraisals are taken into account, if available. If it is not possible to estimate the recoverable amount of an individual asset, the recoverable amount of the smallest identifiable group of assets to which the asset belongs (cash-generating unit – CGU) is determined.

If the carrying amount of the asset or CGU exceeds the corresponding recoverable amount, an impairment loss is immediately recognized through profit or loss. If a CGU is impaired, the carrying amount of any goodwill allocated to the unit is reduced first. Any remaining impairment loss reduces the other non-current assets of the CGU pro rata.
If, following an impairment loss recognized in prior periods, an asset or CGU has a higher recoverable amount, the impairment loss is reversed up to the maximum of the recoverable amount. The reversal is limited to the amortized carrying amount which would have been determined had no impairment loss been recognized in the past. The impairment loss is reversed through profit or loss. Reversals of impairment losses recognized on goodwill are not permitted.

**Inventories**
Raw materials and supplies as well as merchandise are generally measured at moving average cost. Work in progress and finished goods are measured at cost. Cost of conversion of finished goods includes direct material, direct labor, proportionate material and production overheads, and production-related amortization and depreciation insofar as this is a consequence of production. Also included are general administrative expenses, product development expenses, expenses for social facilities, expenses for voluntary social benefits and occupational pensions, to the extent that they are related to production and are incurred in the production period. Borrowing costs are expensed as incurred to the extent that the criteria for recognition in the carrying amount of an asset are not satisfied.

Inventories are carried at the lower of cost or realizable sales price less costs to sell.

**Leases**
In the case of lease arrangements with the Group as lessee, economic ownership of the leased asset is allocated to the lessee in accordance with IAS 17 if substantially all the risks and rewards incidental to ownership of the leased asset are transferred to the Group (finance lease). The depreciation methods and useful lives applied correspond to those for comparable assets acquired for a consideration. Leased assets are generally capitalized as at the date on which the agreement is entered into at the fair value of the leased property or, if lower, the present value of the minimum lease payments. Initial direct costs are added to the carrying amount of the asset. The lease obligations, which correspond to the carrying amount of the leased assets and are amortized and measured in subsequent periods using the effective interest method, are reported under financial liabilities. The interest component of the lease liabilities is reported in the consolidated income statement over the term of the lease.

If economic ownership of a leased asset is attributable to the lessor (operating lease), the leased asset is recognized by the lessor. The corresponding lease payments are generally recognized as an expense on a straight-line basis over the lease term.

**Financial instruments**
A financial instrument is a contract that gives rise to both a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets and financial liabilities, to the extent that they are currently relevant to the HUGO BOSS Group, are classified into the following categories:
a / Financial assets at fair value through profit or loss (FAHfT)
b / Loans and receivables (LaR)
c / Financial liabilities at fair value through profit or loss (FLHfT)
d / Other financial liabilities measured at amortized cost using the effective interest method (FLAC)
e / Available-for-sale assets at fair value (AFS)

Financial assets and liabilities are designated to the above categories upon initial recognition.

Financial assets

Financial assets are recognized initially at fair value. This takes into account any directly attributable transaction costs relating to the acquisition.

All purchases and disposals of financial assets are recognized at their value at the settlement date, the day when the group is obliged to purchase or sell the asset.

As a rule, the fair values recognized in the statement of financial position are the market prices of the corresponding financial assets. If these are not available, fair value is determined using generally accepted valuation models by reference to current market parameters. Such techniques include using recent arm’s length market transactions, reference to the current market value of another instrument which is substantially the same, or discounted cash flow analysis and other valuation models.

Cash and cash equivalents recognized in the statement of financial position comprise cash in hand, balances with banks and other short-term deposits with an original term of less than three months; they are measured at amortized cost.

Trade receivables and other loans and receivables are subsequently measured at amortized cost (less any impairment losses), using the effective interest method where applicable. Gains and losses are recognized through profit or loss when the receivables are derecognized, impaired or settled.

Financial assets are measured at fair value through profit or loss if they were acquired for the purpose of selling them in the near future. This includes derivative financial instruments that are not designated to an effective hedging relationship in accordance with IAS 39. Gains and losses from financial assets measured at fair value through profit or loss are always posted to profit or loss.

Financial assets that are not measured at fair value through profit or loss are tested for impairment at every reporting date. If the carrying amount of a financial asset exceeds its fair value, it is reduced to the fair value. This decrease constitutes an impairment loss that is posted through profit or loss. An impairment loss recognized in profit or loss in a prior period is reversed if this is necessary on account of events occurring after it was originally recognized. Available-for-sale assets comprise non-derivative financial assets which are not allocated to any other measurement category and other financial assets which include non-consolidated subsidiaries.
A financial asset is derecognized when the contractual rights to receive cash flows from the financial asset expire or are transferred. In the latter case, substantially all the significant risks and rewards of ownership of the financial assets must be transferred or control over the asset must be transferred.

**Financial liabilities**
Financial liabilities are recognized initially at fair value. This takes into account any directly attributable transaction costs.

Derivatives that are not designated to an effective hedging relationship are measured at fair value through profit or loss. Negative fair values are reported under other financial liabilities. Gains and losses from subsequent measurement are recognized in profit or loss.

Trade payables and other financial liabilities are subsequently measured at amortized cost using the effective interest method. Any resulting gains and losses are posted to profit or loss when the liabilities are derecognized or extinguished.

A financial liability is derecognized when the obligation underlying the liability is discharged, canceled or expired.

**Hedging instruments**
In the HUGO BOSS Group, derivative financial instruments are solely used to hedge interest rate and currency risks from the operating business.

When hedges are entered into, specific derivatives are allocated to hedged items. The requirements of IAS 39 for the designation of hedges are satisfied.

Pursuant to IAS 39, all derivative financial instruments are to be allocated to the “Financial assets measured at fair value through profit or loss” category and measured at fair value. Changes in the fair value of derivative financial instruments are generally recognized in profit or loss.

To the extent that the financial instruments used are effective hedges as part of a hedging relationship in accordance with the requirements of IAS 39 (cash flow hedges), fair value fluctuations during the term of the derivative do not affect profit or loss for the period. Instead, fair value fluctuations are recognized in equity in the corresponding reserve item. The cumulative amounts recognized in equity are recycled through profit or loss in the same period during which the hedged cash flows affect profit or loss.

**Provisions**
Provisions are recognized if a past event has led to a current legal or constructive obligation to third parties which is expected to lead to a future outflow of resources that can be estimated reliably. Provisions are reviewed at each reporting date and adjusted to reflect the current best estimate. Provisions for rebuild obligations in retail stores are recognized as liabilities at the present value of the best estimate of the amount required to settle the obligation. Corresponding assets are capitalized at the equivalent amount and depreciated over the term of the lease agreement. Provisions with a term of more than one year are discounted using a risk-free interest rate. Where the effect of the time value of money is material, the amount of the provision equals the present value of the expenditures expected to be required to settle the obligation.
Provisions for pensions
The measurement of pension provisions relates to the Group’s obligation to provide benefit-based and contribution-based plans. IAS 19 mandates the use of the projected unit credit method for the provision of benefit-based plans, which takes into account future adjustments to salaries and pensions. The year-end present value determined using the projected unit credit method was compared to the fair value of plan assets in the employer’s pension liability insurance to the extent that offsetting is permissible (asset ceiling). Actuarial gains and losses are immediately posted in full to other comprehensive income. Actuarial gains and losses are not reclassified from other comprehensive income to consolidated net income in subsequent years. The same applies to all effects of the asset ceiling. Net interest determined by multiplying the net pension liability by the discount rate underlying the gross pension obligation (DBO) is reported in the financial result. The difference between the actual interest return on plan assets and the anticipated return on plan assets obtained using the discount rate is posted separately to other comprehensive income. The service cost is reported under the relevant functional costs. The contributions from contribution-based pension schemes are recognized as expenses in the income statement on maturity.

Restructuring provisions
Restructuring expenses are recognized in the period in which they are incurred or in which the criteria for the recognition of a provision are satisfied. Early termination payments are recognized as an expense and an obligation if the Company has verifiably made a commitment under a formal plan by either offering termination benefits intended as an incentive for voluntary redundancy or has committed to early termination before the normal retirement age is reached.

Share-based compensation programs
Share-based compensation programs are accounted for in accordance with IFRS 2. The HUGO BOSS Group’s long-term incentive (LTI) program initiated with effect from January 1, 2016, for members of the Managing Board and eligible management staff is a cash-settled, share-based payment transaction. The expenses arising from the LTI and the liabilities for settling these benefits are recognized over the expected vesting period. This amount is recalculated on each reporting date and measured using an option price model. Any changes in the fair value are posted to profit and loss. The resultant expense is recorded within personnel expenses and the liability recognized as a provision for personnel expenses.

Contingent liabilities and contingent assets
Contingent liabilities are not recognized. They are disclosed in the notes to the financial statements, unless an outflow of resources embodying economic benefits is very unlikely. Contingent assets are likewise not recognized. They are disclosed in the notes to the financial statements if an inflow of economic benefits is probable.

Exercise of judgment and estimates when applying accounting policies
The preparation of the Group’s consolidated financial statements requires Management to make judgments, estimates and assumptions that affect the reported amounts of income, expenses, assets and liabilities, and the disclosure of contingent liabilities, at the end of the reporting period. These estimates and judgments are made to obtain a fair presentation of the Group’s net assets, financial position and results of operations. The main judgments and estimates used are specified in the notes to the financial statements.
